

## Product information ak5010 MBS

## The breast diagnostic chair

Here you will find the technical data  
for the Diagnostic chair

## Patient positioning and transport

### Mobile examination chair

The ak5010 MBS breast diagnostic chair is a technically and ergonomically specially developed chair for the preparation, transport and treatment of patients during breast examinations. The battery-electric height adjustment is independent of the mains and allows full mobility in the clinic or practice.

The height adjustment of the seat from 68cm to 98cm, as well as the simple and individual adjustment options for the head and back segments, allow the area of intervention to be precisely represented. Standard lifting columns (up to 135kg body weight) or heavy-duty lifting columns (up to 250kg body weight) are available. The optionally available back support is used to safely position the patient in a lateral position. The electrical height adjustment is switched off via the generous on/off foot switch in order to avoid movements of the lifting column due to accidental activation of the foot switch during an intervention. Quality rollers and the AKRUS roller fixation system ensure pleasant mobility and a secure stand. With the help of the built-in foot step, patients can comfortably get in and out of the ak5010 MBS breast diagnostic chair.

The AKRUS cushions in manufactured quality ensure that the patient feels comfortable sitting and lying down. A large selection of colors allows the color to be adapted to the clinic or practice environment, and you can also choose between two upholstery variants.

The ak5010 MBS breast diagnostic chair is delivered fully assembled and the use of high-quality components allows many years of reliable use when used as intended. In the event of a service requirement, authorized medical technology dealers are available.

*Fold out foot support*

*infinitely adjustable*

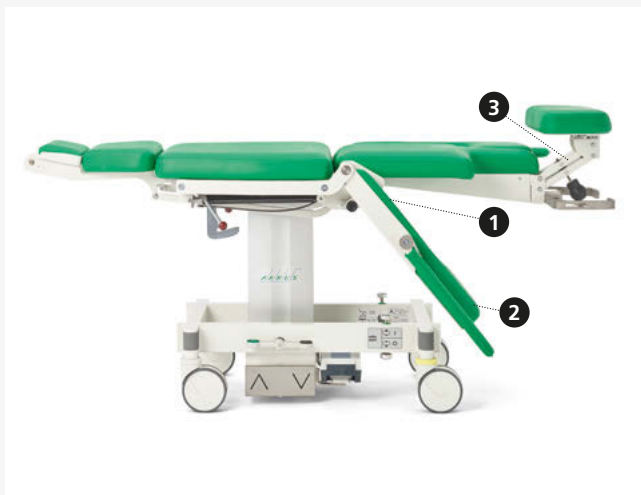

*Biopsy position*

*Shock position*

# Focus: Mammography / Biopsy / Stereotaxy

## APPLICATIONS

- ❶ Individually adjustable backrest segments
